## Chevron **SECURA** INTRUDER RESISTANT GLASS

Chevron Glass Pty. Ltd. has released a new high performance product, Chevron **SECURA**.

It is a toughened laminated glass product designed for use in situations requiring an intruder resistant level of security and/or structural strength.

Typical applications requiring structural strength include glass roofs, frameless balustrades, facades and glass pool fences.

Chevron **SECURA** combines the strength of toughened glass with the safety of lamination, together with a super tough interlayer.

Chevron **SECURA** can be manufactured with clear glass to maximise appearance and light transmission, or toned glass, Low E glass, or included in an insulated glass unit for solar control and energy efficiency.

Chevron **SECURA** is suitable for internal and external applications and has excellent resistance to moisture on any exposed edge.
